

## **QUONONCHONTAUG CENTRAL BEACH FIRE DISTRICT**

**December 1, 2019**

**Dear Greetings!**

**A post Thanksgiving weekend update.**

**As you know Well #1, our principal water source, has consistently returned total Coliform bacteria but not E Coli since mid October.**

**Under RIDOH's direction we will be re-chlorinating well #1 tomorrow, Monday December 2nd. Well #1 will be taken off line sometime tomorrow, chlorinated, and the chlorine will be allowed to sit in the well overnight.**

**Well #1 will be flushed and reconnected to the system by Wednesday, December 4th.**

**This has been performed previously to Well #1.**

**Therefore, starting tomorrow and most likely through midday Wednesday, the water will be solely from Well #2, which as you recall, has elevated iron levels. The water color may be off so please plan accordingly. Even though Well #2 has not demonstrated coliform bacteria in November we still remain on a Boil Water Advisory.**

**Thank you again for your continued understanding.**

**Vincent Reppucci  
QCBFD PW Chairperson**
